True Secured Web Application

True Digital Security

Company

February 2009

Certification Date

April 2009

Certification Expiration

True Secured Web Applications go beyond conventional certification programs to address web applications. Web application testing further exemplifies the commitment to security this website and its operators demonstrate. True's Web Application Security Standards follow those principles set forth by Open Web Application Security Project (OWASP) and are in compliance with the Payment Card Industry (PCI) Data Security Standard (DSS) Requirement 6.6.

While this, or any other, certification program cannot and does not guarantee security; it does show that the website listed above meets all Payment Card Industry (PCI) guidelines for remote web server vulnerability testing and the more stringent Requirement 6.6, Code Review. The authorized display of the program's certificate validates that when security issues are discovered they are promptly remediated and validated. While True Digital Security's True Secured Certification is gained through pro-active security precautions, implemented secure best practices, and conducted through security reviews, True Digital Security makes no warranty or claim of any kind, whatsoever, about the accuracy or usefulness of any information provided herein. By using this information you agree that True Digital Security shall be held harmless in any event.
